

Product Description:

GAZ-CS03 is highly sensitive gas leak fluid that has been developed specially to detect gas/air leakage from any pressurized source. Leaks can be amazingly difficult to pinpoint.

GAZ-CS03 is made from a new blend of high quality compound that is stable, non-flammable, safe to use and works effectively to detect any minute leakage. **GAZ-CS03** bubbles hold their form without drying or bursting long enough to identify tiny point leaks. Similarly, the high surface tension allows bubbles to form (rather than blow off) in larger leaks. **GAZ-CS03** can be diluted with water for more economical use and it will protect the surface from corrosion at the same time.

Applications:

GAZ-CS03 is used in various industries to check pipelines, tube connections, pressure vessels, air chambers, hydraulic systems, joints etc. for any leaks or cracks. **GAZ-CS03** can be applied with a brush on a suspicious joint/connection and any leak from a slightly pressurized line can be quickly noticed by a bubbly white foam appearing. **GAZ-CS03** is water soluble and can be easily washed off with copious amount of water.

Features:

- | | |
|---------------------|--|
| Highly concentrated | - diluting with water to be extra economical. |
| Non-toxic | - applicable to food plants and machineries. |
| Water-soluble | - Easily removed with water. |
| Odorless | - Does not stain or contaminate. |
| Safe to use | - Can be used on sensitive oxygen lines as well. |

Specification:

- | | |
|---------------------------|-------------|
| • Appearance | : colorless |
| • Specific Gravity @ 25°C | : 0.993 |
| • Viscosity | : 79cps |
| • Refractive Index | : 1.488 |
| • Saponification No | : 286 |
