

Product Description:

GAZ-CG03 Gazpro Zeolite Absorbent is naturally occurring volcanic mineral. What makes zeolite unusual is that it is the only known negatively charged mineral in an original state. Zeosorb is highly absorbent allowing absorbed liquids and vapours to come in contact with the negatively charged surface of the zeolite means it has enormous surface area and adsorption capacity.

GAZPRO ZEOLITE ABSORBENT- NATURAL ZEOLITE

- All natural heat sterilized mineral – contains no chemicals
- Exceeds EPA landfill leachate tests – “significantly the most impressive result that I have seen by any absorbent” (Haztech Industries Pty Ltd)
- Absorbs immediately on contact
- Super absorbent capacity
- Won’t leach back absorbed fluids – ecologically safe
- Maintains strength integrity when fully absorbed and makes clean-up-easy
- Natural bonding action of zeolite makes it far more active in the absorption and adsorption process
- Particle size gradation designed to maximize absorption efficacy and minimize floor residue
- De-Dusted to reduce surface bogging and improves handling strong wicking action to pull spills from the surface

TEST PROVE EXCEPTIONAL ABSORBENCY AND CAPACITY

Test conducted by testing laboratories demonstrated the total absorption capacity of **GAZ – CG03** against two popular organic absorbents.

Not only did **GAZ - CG03** absorb more than its competitors it clearly demonstrated that it absorbed more on liquid contact – absorbing 78% of its overall capacity in the first 10 minutes.
